

ABSTRACT OF THE DISCLOSURE

A suspension structure for a front wheel assembly of a wheelchair generally includes struts of front wheel assemblies disposed at corresponding mounting brackets [of] on the frame of the wheelchair. ~~Such that the~~ The struts [may] will rotate upward about the corresponding jockey wheels when the jockey wheels are passing ~~a curb or other~~ an obstacle ~~of the like~~, and meanwhile ~~it will effect~~ effects an uplift of the front end of the frame of the wheelchair[, as], As a result, the gravity center of the user [move] will be shifted backward so as to reduce the load on the jockey wheels, by this way, the jockey wheels may traverse ~~a curb or the like~~ overcome the obstacle without difficulties. Furthermore, the suspension for the front wheel assembly of a wheelchair is [simple] simply structured ~~relative to conventional wheelchair~~ so as to facilitate the assembly and reduce the production cost as well.
